

Experiment 5:

The image shows a C++ IDE with the source code for 'experiment 5.cpp' and a terminal window displaying the program's execution.

Source Code (experiment 5.cpp):

```
1 #include <stdio.h>
2
3 int main()
4 {
5     int n, i, j;
6     int bt[10], pr[10], pid[10], temp;
7
8     printf("Enter number of processes: ");
9     scanf("%d", &n);
10
11     for(i = 0; i < n; i++)
12     {
13         pid[i] = i + 1;
14
15         printf("Enter Burst Time for P%d: ", pid[i]);
16         scanf("%d", &bt[i]);
17
18         printf("Enter Priority for P%d: ", pid[i]);
19         scanf("%d", &pr[i]);
20     }
21
22     for(i = 0; i < n - 1; i++)
23     {
24         for(j = i + 1; j < n; j++)
25         {
26             if(pr[i] > pr[j])
27             {
28                 temp = pr[i];
29                 pr[i] = pr[j];
30                 pr[j] = temp;
31
32                 temp = bt[i];
33                 bt[i] = bt[j];
34                 bt[j] = temp;
35             }
36         }
37     }
38 }
```

Execution Output:

```
Enter number of processes: 2
Enter Burst Time for P1: 1
Enter Priority for P1: 3
Enter Burst Time for P2: 4
Enter Priority for P2: 5

Execution Order:
P1 -> Burst Time = 1
P2 -> Burst Time = 4

-----
Process exited after 24.63 seconds with return value 0
Press any key to continue . . . |
